

VARUBAN KRISHNA N N

Software Developer | AI & Data Science | Game Development
varubankrishna@gmail.com | +91-8148463510 | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

Portfolio: varubankrishna.vercel.app

EDUCATION

B.Tech – Artificial Intelligence & Data Science

Dhanalakshmi College of Engineering, Chennai, Tamil Nadu

Oct 2022 – Present

Higher Secondary Certificate (HSC)

Velammal Vidyalaya Viraganoor, Madurai

2022

Secondary School Certificate (SSLC)

Mahatma Montessori School, Madurai

2020

TECHNICAL SKILLS

Languages: Python, Java, C, C#

Frameworks & Tools: LangChain, LangGraph, Streamlit, Flutter, Unity, Figma, Blender

Libraries & APIs: OpenCV, Pygame, Pandas, NumPy, Plotly, AdMob SDK

Databases & Platforms: SharedPreferences, CoinGecko API, GitHub, LeetCode

PROJECTS

AI Chatbot – LangChain, LangGraph, Streamlit, LLaMA2, Python

- Architected a multi-turn conversational AI system using LangChain and LangGraph with structured prompt engineering and dynamic conversation flow management, enabling context-aware responses across sessions.
- Reduced average query resolution time by 35% through optimized prompt chaining and LLaMA2 model integration, deployed via a responsive Streamlit interface handling real-time user queries.
- GitHub:** github.com/Varubankrishna/ChatBot

Cryptocurrency Trading Signals Dashboard – Python, Streamlit, CoinGecko API, Plotly, Pandas

- Built a real-time trading signals platform that ingests live market data for 10 cryptocurrencies via CoinGecko API, processes them using technical indicators (RSI, MACD), and generates actionable buy/sell/hold recommendations.
- Reduced manual analysis time by delivering automated signal generation with live INR price tracking and interactive Plotly charts, improving decision-making speed for end users.
- GitHub:** github.com/Varubankrishna/crypto_app

Habiture – Habit Tracker App – Flutter, Dart, Local Notifications

- Developed a cross-platform mobile app with daily habit tracking, streak calculation, and progress analytics; implemented local data persistence via SharedPreferences ensuring offline-first reliability.
- Increased user engagement through an integrated notification system and interactive chart visualizations, supporting dynamic real-time UI updates for habit progress monitoring.

Highway Freak – 3D Bike Racing Game – Unity, C#, AdMob SDK, Physics Engine

- Engineered an endless 3D bike racing game with lane-based traffic AI, dynamic speed progression, and near-miss scoring system; implemented combo reward logic and multiple bike selection with smooth physics controls.
- Monetized the Android release by integrating AdMob (banner, interstitial & rewarded ads), optimizing rendering performance for mobile-grade hardware to maintain 60 FPS gameplay.

INTERSHIPS

Data Science Intern | Prodigy Infotech Solutions

Remote | 2024

- Designed and executed end-to-end data preprocessing pipelines to clean, transform, and normalize real-world datasets, reducing data processing time by 30% and improving model training accuracy.
- Collaborated with the ML team to evaluate model performance metrics, identifying bottlenecks in feature engineering that improved final model F1-score by 12%.

Python Development Intern | Oneyes Infotech Solution

Remote | 2024

- Designed a user-centric Library Management System UI in Figma using modern design principles and responsive components, reducing user navigation steps by 40% based on usability testing feedback.
- Translated Figma prototypes into functional Python-based application flows, bridging design and development to ensure consistent UI/UX implementation.
